

Colquitt County Extension Peanut Variety Evaluation

In order to answer the question about which peanut variety to plant, the Colquitt County Cooperative Extension established two variety trials during the 2023 year. This past year, two peanut variety trials were conducted in Colquitt County. The first irrigated demonstration was planted on May 8th and harvested on October 3, 2023. Plots were 6 rows wide, averaged 500 feet long, and replicated four times. Peanut yields, TSWV, leaf spot, and SMK are highlighted in the table below. The results of the peanut variety demonstration conducted in Colquitt County last year showed no significant differences in yield, TSWV, or leaf spot ratings. However, differences were observed in total SMK, as indicated in the table below.

A late planted irrigated peanut variety demonstration containing six varieties was planted at the Sunbelt Ag Expo on June 7, 2023. This demonstration was harvested on November 7, 2023. Plots were 6 rows wide, averaged 250 to 500 feet long, and replicated four times. Yields and % TSWV from this variety trial are reported below.
